Flostar M

Designed to meet the advanced needs of water utilities in large revenue collection applications

Flostar M is the water meter conceived for drinkable water measurement. It's the best choice for metering of water in residential, commercial and industrial applications.

FEATURES AND BENEFITS

- » Low flow accuracy
- » Peak flow capacity
- » Highly engineered materials

Wide Measuring Range

Flostar M is a single jet meter available in sizes from DN 40 to 150.

Its metrological performances far exceed ISO/EEC Class C standards.

Its low flow accuracy range combined with significant peak flow capacity ensure complete and efficient measurement whatever the faced flow-rates.

Reliability

Flostar M features a direct magnetic transmission between the turbine and the register without any intermediate gearing in the metered water.

This results in a very robust and reliable design able to withstand most types of potable water environments.

Ease of read in the toughest humid environments (ie: flooded pits) is secured by hermetically sealed IP68 register (copper can/mineral glass envelope).

Simple and effective

Simple but highly engineered materials and design enable a very long durability and the best performances for water metering.

Endurance & Peak Flow Resistance

Performance over time is a key requirement for efficient billing. Flostar M features a patented turbine ball pivoting enhancing endurance at low flow-rates. Hydrodynamic balance and turbine design bring resistance at high and peak flows.

WATER

knowledge to **shape your future**

- » Single jet Class C
- » Hermetically sealed register (coppercan/mineral glass envelope)
- » Patented ball pivot
- » Patented turbine levitation

Flostar M DN 150

Flostar M indicator

Cyble RF fitted on Flostar M

WORKING PRINCIPLE

Flostar M is a single jet meter. The water jet is canalized by an injector before hitting the turbine. The single jet tapered injector straightens the flow profile. Its large bore area prevents meter overspeed by clogging.

The high precision processing of the inlet **1** allows Flostar M to meet best accuracy without the need for any bypass or calibration vane adjustment system. The turbine movement is directly transmitted to the extra dry register through a magnetic coupling **2** without the need for any intermediate gearing in the metered water.

This results in a meter with very stable accuracy initially and over time in the widest range of installation configurations and potable water nature.

High quality material for the turbine bearings and patented ball pivot **3** design are securing leakage metering initially and over time regardless of the flow profiles. The hermetically sealed copper can/mineral glass envelope of the IP68 register **4** is safeguarding the read and integrity of the indicator in the toughest environments (flooded pits, mechanical tampering attempts, ...).

Flostar M DN40 3D Section

COMMUNICATION : READY FOR SMART METERING

Flostar M is supplied pre-equipped with Cyble Target

Allows communication and remote reading through:

- » Pulse output (Cyble Sensor)
- » M-Bus protocol (Cyble M-Bus)
- » Radio frequency wireless link (Cyble RF)

These Cyble modules allow the Flostar M meter to be connected with various associated systems like our supervision system WaterMind (see specific leaflet). They are particularly adapted to commercial and industrial applications where a need for frequent meter monitoring is expressed especially in hard-to-read locations.

Key Advantages of Cyble Technology

- » No need for additional investment on the meter to implement remote reading
- » Itron standardized meter interface, irrespective of meter technology and widely spread on Itron water meters range
- » Reliability brought by electronic switch (no wear or bouncing)
- » Reverse flow management
- » Principle proven on the field with a 25 years experience
- » Pre-equipment being immune to magnetic tampering

METROLOGICAL CHARACTERISTICS

MID / ISO 4064-1:2005 / OIML R49 Approval Values

Nominal diameter (DN)	mm	40	50	65	80	100	150	
Minimal flowrate	(Q1)	l/h	≥ 100*	≥ 100*	≥ 127*	≥ 157.5*	≥ 250*	≥ 254*

Weight	Kg	5.7	6	10	17	21	31.5	62.1

* Additional sleeve DN 150 length 50 mm available.

INSTALLATION REQUIREMENTS

- » Flostar M should be installed in the horizontal position with totalizer facing up for optimum performances.
- » Installation of a strainer upstream of the meter is recommended to protect the hydraulics against debris that might result from accidents on the network, piping corrosion, ... (see Itron strainer leaflet)
 - Flostar M DN 40 is supplied as standard with a strainer and can be fitted with standard non return valve on request).
- » Flostar M is not sensitive to flow disturbances

Easy sizing of the meter

Qn 15, 20, 30 and 50 m³/h can be supplied with the upper DN length and flanging for easy downsizing in the field (meter sizing adaptation to real faced flow-rates).

Our company is the world's leading provider of smart metering, data collection and utility software systems, with over 8,000 utilities worldwide relying on our technology to optimize the delivery and use of energy and water.
